Personal Projects

▶ **TaxAlong:**   A React-Rails app that calculates estimated tax for 1099 workers. Aimed specifically towards Postmates, Uber, & Lyft employees

▶ **Legislative:**   Co-created web app which uses government data in real-time to provide easily digestible visualizations of bills hitting the congressional floor. Uses Express, MongoDB, HighCharts, Javascript, & OpenGov API.

▶ **Quoter:**   A Rails web app that allows users to create a contact list and send them quotes and jokes. Utilizes three APIs for data and the Twilio API for SMS messaging.

▶ **SkipToMyLoo:**   A yelp like app for rating public toilets. Uses Ruby, Sinatra, & SF Open Data

Experience

Manufacturing China
Project Manager / Web Dev (Contract)

Los Angeles, CA
August 2017 – Present

- Built out a Ruby on Rails web app of Chinese Manufacturing companies, where users could bookmark factories for goods to be produced. Basic features included mailers, bookmarking, upgrading account using Stripe.
- Managed a team of 2 developers, liaison to CEO, bringing app to MVP
- QA-ed developers work
- Modeled and scraped data for database
- Created responsive design for UI
- Created Sitemap and Metatags for SEO

Team One
Front End Developer (Contract)

Playa Vista, CA
May 2017 – August 2017

- Contracted to build out Spanish version of Lexus' website
- Implemented UI design using HTML and CSS.
- Use company's CMS to update models

AutoID
Front End Developer (Contract)

Glendora, CA
Feb 2017 – April 2017

- Designed and built dashboard pages using HTML, Bootstrap, JavaScript, Rails
- Developed and maintained the validation services using Devise and Regex
- Built out and modified our own Common.js files in jQuery
- Created a web-based WYSIWYG editor using javascript

Speakr
Web Developer

Los Angeles, CA
Mar 2016 – Oct 2016

- Developed an app allowing Marketers to select Influencers to advertise their brands.
- Used React to build cart systems with search capabilities and the ability to create smart carts based on past selections
- Heavy use of Haml & Bootstrap to create a responsive & uniform UI for components
- Worked on Rails to make api calls to the old system, Twitter, and Instagram.
- Initial Build as a Monolith service
  - Ruby on Rails (jRuby, Rails 3), jQuery/Ajax, D3.js, React.js, Gulp.js, HAML, HTML5, SASS, Devise/CanCan, Twitter API, Instagram API, PostgreSQL
